MAXTRAC

Mission and Vision

Maxtrac is an innovative, globally unique company in the suspension industry, using our technical experience to serve the aftermarket.

For more than 15 years Maxtrac has developed suspension components for all kinds of specialised applications. A well-known brand product is the Electronic adjustable sport suspension that gives the driver control over the vehicle under any conditions, even on track. Some other successful items are lowering kits, sport suspensions and coil over kits. These diverse development projects, have given Maxtrac a huge vehicle data bank of information. This information is used to develop a wide program of suspension replacement components.

Our Sales office and technical research centres are located in The Netherlands. Our Technical staff work strictly in accordance with ISO 9001:2000. All our products are developed in close contact with the German TÜV Institute, securing the highest level of safety and durability.

The central warehouse is located in Bad Bentheim Germany. This 8.000 square metre warehouse keeps stock of approximately 450.000 shocks and springs. Components can be packed and shipped within 24 hours of receiving an order. Goods can be sent on pallets by truck, or by parcel service.

MAXTRAC

Easy Strut

The Easy Strut is Maxtrac newest solution that not only ensures high workplace safety. Save time and money by using this new innovative product:

- Fast and safe assembly*
- Optimum price/performance ratio*
- No use of special tools*
- Higher workplace safety*
- Higher customer satisfaction*
- Superior ride performance*

The latest & highly innovated product to the Maxtrac program gives a unique approach to fitment centres and workshops.

Instead of replacing parts on a strut, we supply a fully pre-mounted strut with only the highest quality new components. This secures an extremely precise labour cost calculation, no need to re-contact your client or to delay the delivery time, because additional parts have to be ordered. The entire program is highly competitively priced, which eliminates any competitor.

The Easy Strut is complete with the following components: Gas pressurized shock absorber, coil spring, bump stop, dust cover, spring-seat and bearings. This ensures that during replacement no unexpected surprises occur with worn out parts that need extra ordering, extra cost or leading to blocking the car lift for several hours.

100% customer satisfaction is a certainty, clients get all new components, within a fixed time and labour cost.

MAXTRAC

Coil Springs & Shocks-absorbers

Maxtrac uses, for its shock absorber program, the same kind of development philosophy. We work towards a well consolidated program, and accordingly the latest OE specifications. No longer are there 5 different shocks for 1 application. Maxtrac always provides a gas filled shock absorber, that covers a wide range of applications.

Shock absorbers no longer function 100% after 80.000 km, therefore, check the following to ensure your shock absorbers are functioning correctly.

- *Worn Shock absorbers can cause rapid and uneven tyre wear.*
- *If a shock absorber shows traces of oil leaks a quick replacement is necessary*
- *If there are more than two bounces when you push down hard on one of the vehicle corners, the shock needs replacement.*
- *Worn shock absorbers allow increased body roll and sway, making driving the vehicle and cornering behaviour, unstable and unsafe.*
- *Worn out shock absorbers increase the braking distance several metres. This is caused by the fact that tyres lose contact with the road on tight corners and bumpy roads.*

The Maxtrac Replacement spring program gives a high level of consolidation in comparison to the OE program. This reduces stock levels and costs.

All our automotive springs are produced in Chrome Silica (8,00 to 15,00 mm) and Chrome Vanadium (14,00 to 22,00 mm) wire. The choice of the material depends on several matters, Concerning dimensions and the design of the spring. The material is purchased strictly from approved suppliers according to NEN-ISO-9001:2000 norm. This means that only material is delivered which meet all requirements and demands as requested by Maxtrac. The controls are done before shipping (mechanical and chemical) and the necessary certificates are delivered together with the shipment.

Coiling the springs are manufactured on CNC Coiling machines to guarantee perfect shape & dimensions. After coiling all springs undergo a shot peening process. The shot peening process is indispensable for the endurance of the springs. With our shot blasting machines, the springs are given a surface stress compression. The fatigue life increases 10 fold, & the surface is perfect for phosphating & painting. All springs receive an automotive surface treatment, which is resistant to corrosion. Before being treated, the springs are controlled for the last time. All dimensions are checked and also the force and deflection are measured and compared to the datasheet. After approval the springs are put onto an overhead conveyor to be degreased, zinc phosphated and passivated. Once dry, springs are powder coated in the powder coating plant in accordance with OE specifications of adhesion & salt spray endurance.

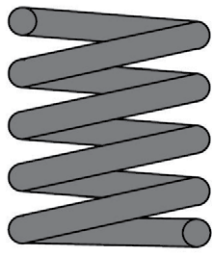

Why check/change a spring?

Springs carry most of the vehicle weight and absorb the impact of the road conditions. Together with the shock absorber the springs keep tyres in contact with the road and reduces body roll. Due to fatigue and corrosion the springs gradually wear. This leads to weaker springs that will shorten or even break. A broken or shortened spring will affect the road holding, increasing tyre wear and longer braking distances. Therefore we strongly suggest to check the spring/shock absorbers every 80.000km or after 4 years.
