COIL
SPRINGS

THE SPRING SPECIALISTS

Kilen - from Europe's leading spring manufacturing group - offers the widest range of standard and heavy duty replacement springs in the market.

Produced in Sweden using cold coiling technology, every Kilen spring undergoes a multi-stage manufacturing process to ensure optimum performance and the longest possible service life.

All Kilen springs are subject to shot peening after coiling, a process which bombards each spring with millions of tiny steel balls to introduce a positive residual stress in the spring; improving fatigue strength and preventing premature breakage.

Kilen springs are protected from corrosion by a chemical compound called Zinc Phosphate, which offers galvanic or 'sacrificial' protection via preferred oxidation, i.e. the zinc corrodes before the spring steel, and generally at a slower rate, prolonging the life of the spring. Each spring is then coated with epoxy powder resin paint via electrostatics, providing further corrosion protection.

Every Kilen spring is inspected and tested to ensure it meets the highest quality standards, then marked with a production code and batch number to secure full product traceability.

Kilen springs are packaged in strong, attractively designed boxes; complete with application data, part number and barcode, to ensure every customer receives the correct spring for the desired application.

All articles in this catalogue are stock items. Kilen also offer a wide range of gas springs and sport springs, together with a comprehensive range of leaf springs and U-bolts.

Important Information

1. Application

- 1.1. Unless specifically stated otherwise, the listings in this catalogue are for 2WD hatchback or saloon cars with petrol engines, and not for vehicles equipped with self-levelling, eco, off-road or sport-suspension.
- 1.2. As a general rule hatchback, saloon and estate models typically have the same front springs; whilst petrol and diesel models typically have the same rear springs. There are some exceptions.
- 1.3. Design code illustrations for each spring type can be seen by folding out the rear cover flap.

2. Safety

- 2.1. For safety, suspension springs should always be replaced in axle pairs. Different springs on the same axle may cause an imbalance in the suspension, adversely affecting vehicle handling and braking. Our Guarantee applies only when springs have been replaced in axle pairs.
- 2.2. Always check the spring size and end shapes are correct prior to attempting fitment. Springs should be fitted with the same orientation as the original equipment spring.
- 2.3. Appropriate care should be taken when replacing a spring. A compressed spring holds a huge force and could cause serious injury if it came loose during fitment. Special tools should always be used to compress a spring.
- 2.4. For safety, spring installation should only be undertaken by a competent person and instructions from a recognised repair manual should be followed.
- 2.5. Spring pans, bushings and link-arms should always be checked for damage and replaced if necessary.
- 2.6. After installation, springs should be checked to ensure they are correctly located at the ends and are not too short or loose. Wheel alignment should also be checked.

3. Design and warranty

- 3.1. Our springs are designed based on specific OEM-specifications and may cover more than one OE spring reference. There are cases where we produce a slightly modified version of the OEM spring to improve durability; whilst maintaining the same performance characteristics and ride height.
- 3.2. Some OE coil springs are manufactured from tapered wire (progressive material thickness) which can be prone to premature failure. All the springs we produce are designed in and manufactured from parallel wire, and give the same spring performance and ride height as the OE spring. They are guaranteed to be of high quality and are covered by our 3 year warranty. Also listed in this catalogue are the tapered wire versions, to support our customers with a choice: These come with a 2 year warranty.

4. Quality

- 4.1. All our springs are manufactured in accordance with ISO9001 & ISO14001, and in a TS16949 environment.

5. Heavy duty springs

- 5.1. The heavy duty springs listed in this catalogue are designed to be 10-30% stiffer than the standard spring. It should be noted that heavy duty springs do not increase the maximum load carrying capacity of a vehicle.
- 5.2. We recommended using heavy duty rear coil springs on vehicles that regularly carry a heavy load or tow a trailer.
- 5.3. In a small number of cases heavy duty front coil springs are listed; for certain Mercedes models with air conditioning and automatic transition for example.
- 5.4. The benefits of using heavy duty springs are improved road holding and a reduced "sitting down" effect.

Some Mercedes models have suspensions where the ride height can be "fine-tuned" by the use of rubber shims / spring spacers.									
* = Cars with more than one piece of extra equipment e.g. air condition, automatic transmission etc.
