# Federal-Mogul: COMPLETE ENGINE EXPERTISE

# BRINGING PREMIUM QUALITY TO THE AFTERMARKET

## A GLOBAL HOUSE OF EXPERTS

Through a group of top-class brands, Federal-Mogul offers a complete array of innovative products designed to solve problems, make the repair job easier and improve vehicle performance. Our Aftermarket solutions include engine, sealing, steering, braking, and routine service repairs.

Being part of this worldwide network of specialists, each and every Federal-Mogul engine brand benefits from our global know-how and expertise. This is how each of them has grown to become the reference in its category:

**AE** for BELTS, VALVETRAIN & CAMTRAIN

**GLYCO** for BEARINGS

**GOETZE** for PISTON RINGS & CYLINDER LINERS

**NÜRAL** for PISTONS & ASSEMBLIES

**PAYEN** for GASKETS, HEADBOLTS & OIL SEALS

## OE TECHNOLOGY AND MANUFACTURING LEADERSHIP

Aftermarket customers across the globe benefit from our expertise in developing Original Equipment (OE) technologies for the world's major automotive manufacturers. Federal-Mogul provides you with excellence in advanced engine solutions that meet and often exceed the high exacting standards set by vehicle and engine manufacturers. Most Federal-Mogul Aftermarket parts are designed and manufactured to match strict OE requirements and tested in world-class OE testing facilities.

## GLOBAL RESEARCH & DEVELOPMENT

A global network of state-of-the-art Research & Development (R&D) centres, employing about 200 scientists and engineers, supports Federal-Mogul's factories to ensure that we stay ahead of our competitors. Working alongside Original Equipment manufacturers, our R&D centres develop parts and materials allied exactly to the needs of today's engines. This has made Federal-Mogul a leader in providing the perfect match between application and product.

## AE TIMING BELTS AND TIMING BELT KITS A COMPLETE AND CONVENIENT TIMING SYSTEM SOLUTION

Whether you need a single timing belt or a complete timing belt kit that offers premium quality and form assurance, AE can offer you a solution that perfectly meets your needs. AE's timing belt line-up includes 493 timing belts and 210 timing belt kits that contain every necessary component. All timing belts are made of a tough, wear-resistant fabric that withstands oil, engine heat and chemicals, while their high tensile strength cord construction minimises stretch.

**Timing belts** are flat belts with several teeth running over the width of the belt. They turn the camshaft at exactly half the speed of the crankshaft, thereby causing the intake and exhaust valves to open and close in time with the engine's pistons as these move up and down in the cylinders.

**Timing belt kits** include 1 or 2 timing belts and one or more timing components (tensioners and/or pulleys). AE's timing belt kits are designed to provide a complete timing system maintenance solution. Also the metal parts in the kit are manufactured to match high quality specifications and have been tested extensively to guarantee optimal performance.

\*HNBR: Hydrogenated Nitrile Butadiene Rubber

## AE BELTS – OUTSTANDING FLEXIBILITY MEETS OPTIMAL DURABILITY

Multi-ribbed and single-ribbed V-belts drive the secondary engine components such as the water pump, alternator, air-conditioning compressor, power-steering pump etc. AE belts support optimum drive, even under today's toughest conditions of heat and load, and offer exceptional flexibility and resilience to stretching.

**Multi-ribbed V-belts** are flat belts with multiple ribs (3 to max. 8) running over the complete length of the belt.

1. TOP FABRIC
2. TENSION MEMBER
3. COMPRESSION RUBBER
4. BASE FABRIC

**Single-ribbed V-belts** are trapezium belts with several ribs running over the width of the belt.

1. TOP FABRIC
2. TENSION MEMBER
3. COMPRESSION RUBBER
4. BASE FABRIC

## TAKE IT FROM THE EXPERTS

Not heeding good advice can be costly. Timing belts play a vital role in keeping the valves and pistons working in a precise order, and timing belt failure can even result in excessive engine damage. That is why AE would like to share a few tips and recommendations with you.

### 1 Belt inspection

- > Strictly follow the instructions of the engine manufacturer
- > Check the belt's tension and condition at least every 20,000 km

### 2 Belt replacement

- > Never install a used timing belt or used components
- > Replace the timing belt according to the instructions given by the engine manufacturer
- > Replace the timing belt at least every 80,000 km

### 3 Belt selection

- > Consult the AE Belt catalogue (CATAE902) and look up the engine manufacturer and model
- > If possible, check the timing belt's number of teeth, width and profile
- > In case of doubt, contact the supplier or your distributor

### 4 Belt storage

- > Store belts away from sunlight, oil, water, dirt and solvents
- > Belts should not be crushed, or bent tightly, e.g. from hanging on a peg or like system
- > Do not store belts longer than 3 years due to the natural aging of rubber
- > Store belts in a cool and dry place (15-25°C) to ensure reliability
- > For the best protection, store belts in the original AE packaging

**BELTS**

# TIMING BELT TROUBLE TRACER CHART

## SYMPTOMS

Noise prior to failure: Whining from over tightness. Failing belt whipping the enclosure. Slapping noises from a slack belt.

Failure: A few popular engines are designed such that the valves when fully open will not contact the piston at top dead centre. Cam belt breakage will stop the engine but should not cause any damage.

However, on most engines, timing belt failure results in major damage. Valve to piston contact often occurs requiring replacement of valves, valve guides, camshaft pistons, and possibly cylinder head and block repair.

## SERVICE TIPS

Do not refit a timing belt. Engine manufacturers specify the tension to which a new belt should be set. In operation however, the tension will relax slightly to a lower value. If a used belt was refitted, and tensioned to the manufacturer's figure for a new belt, it would run too tight in use. As it is almost impossible to refit a belt to the tension it ran at before removal, it is recommended that belts should never be refitted.

Change your belt at the interval specified by the vehicle manufacturer. Due to the constant flexing the fibres of the tension cords eventually fatigue, and break. The life of a belt depends upon many factors including: the tensile forces it transmits, its width, its overall length, the design of the cords, the size of the pulleys and the torsional vibration characteristics in the engine.

The manufacturers replacement period has been established so that a belt is renewed before the fatigue may cause it to fail, and should be adhered to.

Storage of timing belts. Timing belts are rubber composite products and as such should be stored away from sunlight, oil, water and solvents. They should not be crushed or bent tightly, for example by hanging on a peg.

## BELT CONSTRUCTION

Tension member:  
fibre-glass cord wound round the belt

Facing fabric:  
An elastic nylon facing which gives a hard-wearing surface, and polishes to a smooth, low-friction finish

Rubber stock: moulded and cured around the cords and the facing fabric

Each of these materials is available in variety of grades, which are matched to a belt's application.

## GENERAL REMEDY

All failures require the engine to be rebuilt to the manufacturers specification replacing all damaged components. In particular, ensure that:

- The belt is correctly tensioned.
- The tensioner mechanism operates correctly and is properly secured.

- All idler wheels and auxiliary shafts rotate freely.
- The gears are clean, undamaged, and in alignment.
- The enclosure is in good order.
- Any oil leakage into the enclosure has been stopped.

## FOREIGN BODY ENTRAPMENT

Symptom: Belt breakage, in a curved or ragged tear.

Cause: A foreign body has become trapped in the drive and has over-stretched and broken the tensile cords.

Remedy: Attempt to locate and identify foreign body (nut, bolt, washer etc). Ensure belt enclosure is effective. Set new belt tension and ensure tensioner mechanism is tight.

## EDGE WEAR

Symptom: Excessive wear and damage to the belts edge.

Cause: Damaged gear flange, or misaligned gears.

Remedy: Replace damaged gears and ensure correct belt alignment.

Set new belt to correct tension and ensure tensioner mechanism is right.

## LAND WEAR

Symptom: Wear, or polishing, on the lands between the teeth, possibly wearing down to the tension cords' with polishing on the tooth crests of trapezoidal belts.

Cause: Excessive tension, causing the belt to wear on the gear lands. Rough gears abrading the belt.

Remedy: Replace gear(s) if required. Set new belt to correct tension and ensure tensioner mechanism is tight.

## TOOTH PEEL

Symptom: Teeth peeling, emanating from root cracks. Often is present together with tooth shear.

Cause: Very low tension allowing the belt to jump teeth.

Remedy: Set new belt to correct tension and ensure tensioner mechanism is tight.

## TOOTH SHEAR

Symptom: Six or more teeth missing, often with cracking in roots of a number of teeth.

Cause: May be due to sudden overload of the drive from the seizure of a driven part, such as a water pump.

Also may be due to low tension, which allows the belt to ride high on the gear, producing excessive bending moments, and deflection of the teeth until cracks form.

Remedy: Ensure all driven items rotate smoothly.

Set new belt to correct tension and ensure tensioner mechanism is tight.

## TOOTH WEAR

Symptom: Hollows through the facing fabric.

Cause: Extremely low tension allows the belt to ride out on the gear, causing localised wear on edge of the thrust face. Sometimes excessive tension, pulling the belt up the land, may wear the tooth face, before a tensile failure.

Remedy: Set new belt to correct tension and ensure tensioner mechanism is tight.

## OIL CONTAMINATION

Symptom: Dirty or smelly belt, with a ragged decomposing structure.

Cause: Contamination from a failed oil seal, or an oil or diesel leak, breaks down the adhesion of the rubber. Swelling can also occur and cause mis-meshing leading to other types of failure.

Remedy: Ensure oil leak is stopped. Check belt enclosure and dust shields. Set new belt to correct tension and ensure tensioner mechanism is tight.

## TENSILE FAILURE

Symptom: Tensile breakage, with a straight break between two teeth.

Cause: Some of the tensile cord's fibres have broken due to crimping (folding) before or during assembly, creating a weak point. A belt running over-tensioned may sometimes cause teeth to ride up onto gear lands, resulting in vast over stretching and tensile failure.

Remedy: Replace belt carefully, without pinching or levering. Set new belt to correct tension

and ensure tensioner mechanism is tight.

## BACK CRACKS

Symptom: A series of cracks across the back of the rubber stock.

Cause: The rubber has been over-heated and has degraded, possibly from friction on a seized idler or water pump. Extreme cold may have the same effect.

Remedy: Ensure all spindles driven off the back of the belt, including water pumps, rotate freely. Set new belt to correct tension and ensure tensioner mechanism is tight.

Federal-Mogul supply a complete range of timing products.

For AE timing belts technical details and cataloguing information please visit
