**Отличительные  
особенности  
дисковых  
тормозных  
колодок  
FINWHALE®**

Все комплекты дисковых тормозных колодок ФИНВАЛ отвечают требованиям Правил №13 и 90 ЕЭК ООН и соответствующего им российского стандарта ГОСТ Р 41.13-99. При производстве тормозных колодок используются самые современные технологии и материалы. В процессе изготовления колодки подвергаются 100% проверке качества. Все ступени производства, а также поставщики комплектующих материалов сертифицированы на соответствие требованиям стандарта ISO 9001. Фрикционные накладки колодок не содержат асбеста.

**Основание колодок** изготавливается из листовой низкоуглеродистой стали методом холодной штамповки. Для надежного соединения с фрикционной накладкой в основе колодки делается не менее двух сквозных отверстий, создается дополнительная шероховатость поверхности и добавляется специальный состав, улучшающий соединение основания с накладкой, понижающий шум при торможении и улучшающий теплоизоляцию. Некоторые модели колодок имеют специальную противоскрипную и теплоизолирующую накладку, которая закрепляется на основании со стороны, противоположной накладке.

**Пружины**, предотвращающие стук от перемещения колодок в суппортах при движении, закрепляются на основании при помощи заклепок или вставляются в отверстия основания.

**Фрикционная накладка** содержит антипирен, графит, барит и окись алюминия, армированные металлическими волокнами и соединенные специальным связующим веществом. Процентное содержание компонентов в смеси зависит от требований завода-производителя автомобилей и разрабатывается и контролируется заводской лабораторией. Готовая смесь наносится под давлением на основание и предварительно полимеризуется при температуре 20°C в течение 5-10 минут. Окончательная полимеризация фрикционного материала осуществляется при нагреве в специальной термической камере до температуры 250-300°C и последующем медленном остывании. Процесс нагрева и остывания проходит в течение 24 часов на специальной установке. Процесс полностью автоматизирован и постоянно контролируется. Такая технология обеспечивает сочетание необходимых свойств фрикционной накладки и колодки в целом. После окончания процесса полимеризации рабочая и торцевые поверхности накладки дополнительно обрабатываются для получения точной геометрической формы и нужной шероховатости рабочей поверхности. Шероховатость выбирается таким образом, чтобы обеспечить максимальную скорость приработки к тормозному диску. Дополнительные канавки на рабочей поверхности накладки улучшают охлаждение колодки и способствуют удалению продуктов износа колодки.

**Сигнализаторы износа колодок** могут быть электрическими или механическими. Электрический сигнализатор обеспечивает срабатывание электрической или электронной системы контроля износа колодок на автомобилях, оборудованных такими системами. Электрическая схема и разъемы такого сигнализатора соответствуют требованиям завода-производителя автомобиля, для которого предназначен данный комплект колодок. Механический сигнализатор при износе колодок, близком к предельному, издает при торможении звук, предупреждающий водителя о том, что необходимо провести обслуживание тормозной системы.

**Комплект колодок** состоит из 4 колодок для одновременной замены на правом и левом тормозных механизмах одной оси.

**Качество тормозных колодок** обеспечивается полной автоматизацией производства и использованием современных методов контроля в соответствии с требованиями международного стандарта ISO 9001.

**Потребительские  
преимущества  
дисковых  
тормозных  
колодок  
FINWHALE®**

Современные материалы и технологии, примененные в колодках «ФИНВАЛ», позволяют:

- Уменьшить усилие на педали тормоза.
- Сократить тормозной путь, особенно при торможении со скорости 100 км/ч и более.
- Уверенно двигаться по горным дорогам.
- Облегчить движение в тяжелых дорожных условиях, в том числе в крупных городах.
- Улучшить активную безопасность автомобиля за счет улучшения тормозной динамики.
