Корпус из упрочненной стали, имеет защитное гальваническое покрытие и окрашивается порошковыми эмалями для предотвращения коррозии в течение всего срока службы щеток стеклоочистителя. Увеличенное количество точек соединения корпуса с чистящей лентой позволяет добиться равномерного прижима чистящей ленты по всей ее рабочей длине.

Пластмассовые вставки обеспечивают соединение деталей корпуса с минимальными зазорами и предотвращают повреждение лакокрасочного покрытия корпуса в процессе работы щетки.

Металлический спойлер является частью корпуса щетки и имеет оптимальную аэродинамическую форму.

Прижимные пружины чистящей ленты изготовлены из нержавеющей пружинной стали.

Чистящая лента изготавливается методом формования из смеси на основе натурального каучука с добавлением графита. Состав смеси подобран так, чтобы обеспечить необходимую эластичность в рабочем диапазоне температур.

Расчетный ресурс щеток стеклоочистителей FINWHALE составляет 12 месяцев или 1500000 циклов работы при температуре от -40 до $+50$ градусов Цельсия и при условии использования омывающих жидкостей, соответствующих международным стандартам качества.

Долговечность щеток достигается высокой прочностью корпуса, качественной защитой его от коррозии, использованием нержавеющей стали и износостойкой чистящей ленты.

При движении автомобиля с высокой скоростью щетки со спойлером за счет дополнительной прижимной силы позволяют повысить эффективность очистки стекла.

Простота установки щетки достигается использованием оптимального набора прилагаемых к щетке адаптеров. Адаптеры надежно фиксируют щетку на поводке.

Высокое качество очистки стекол в различных климатических условиях в течение всего срока эксплуатации обеспечивает эластичная чистящая лента. Этой же цели служит равномерное распределение нагрузки на чистящую ленту пружиной и корпусом.

Бесшумность при работе щеток достигается в результате использования графита в составе чистящей ленты. Графит также предотвращает появление царапин на лобовом стекле.
