Construction of sets - resistive core

The conductive silicone core (1) of the ignition lead consists of core substrate (a) and core exterior (b). Core substrate consists of aramid and glassfibre bundle and core exterior is formed by conductive silicone compound. Glass fibres ensure high tension stability and conductive elements ensure maximum effectivity of both energy transmission and attenuation. The braided (3) inner insulation (2) provides electric insulation and improves mechanical qualities in the bend area. The outer silicone jacket (4) protects the core, including the insulation, against the conditions of the working environment under the bonnet. Ignition lead is furnished with contacts. These contacts (5) are specific by their shape (6) in order to ensure the connection between a spark plug and distributor (coil and distributor). The shape and construction of the contacts meet the actual demands for application.

Construction of sets - copper core

The copper core (1) in the ignition leads guarantees loss-free transmission of energy. As a screening elements serve the suppression resistors (5) placed in spark plug (6) and distributor terminals (7). The braided (3) inner insulation (2) provides the electrical insulation and improves mechanical qualities in bend area. The outer silicone jacket (4) protects the core, including the insulation, against the conditions of the working environment under the bonnet. Suppression resistor in the spark plug terminal with metal shield (or in distributor terminal) have 1 or 5 kΩ resistance value.

Construction of sets - inductive core

The cable core (1) consists of stainless conductor (a) wound on chevlar cord (c), both being covered with semiconducting material (b). The cord provides tensile strength, and the winding with semiconducting material works as the conductive joint and attenuation element for screening. The braided (3) inner insulation (2) provides electrical insulation and improves mechanical qualities in bend area. The outer silicone jacket (4) protects the core, including the insulation, at operating conditions under the bonnet. Ignition lead is furnished with contacts.
